

## Silicon Accessories TKX

TKX silicon accessories are made using silicon for high temperatures (working temperatures from -40°C to 220°C) and are composed of 4 layers of polyester reinforced silicon with an overall thickness of 5mm. TKX connections are useful for installing direct air intake kits (conical filters, CDA and DIA) and are suitable for direct installations also to turbine and cooling systems. The silicon accessory line includes traditional straight hoses, reducers and elbows with various diameters (from Ø 60 mm to Ø 85 mm developed for use in standard applications).
